

Aahan Bharat Aggarwal

aggarw57@purdue.edu | 765-701-7496 | github.com/aahanaggarwal
1301, 3rd Street, Hillenbrand Hall, West Lafayette, IN 47906

Objective

An internship to develop my programming and problem-solving skills by working on a useful product.

Education

Purdue University, West Lafayette, Bachelor of Science

Aug 2017 -
Dec 2020

- Major: Computer Science, Minor: Political Science
- Dean's List and Semesters Honors for all semesters
- GPA: 3.96
- Coursework: Software Development, Systems Programming, C Programming, Data Structures & Algorithms, Object Oriented Programming, Computer Architecture

Skills & Abilities

- Java, C, JavaScript, Django Framework, HTML, Python, Firebase, RStudio, React Native, node.js

Experience

Haptik, Intern-Software Engineer

May - June 2018

- Worked on website backend using Django to make job postings dynamic.
- Developed layer for contact of local chat bots with Skype and Google Assistant.
- Learnt about the AI chat bots and the unique natural language processing.

Primary Teaching Assistant, CS19300 - CS Freshman Resources

Aug 2018 - Dec 2018

- Responsible for conducting lab based on learning basic software engineering concepts such as git, bash commands and debugging.

Hillenbrand Dining Court, Student Associate

Jan - May 2018

- Responsible for maintaining a clean and efficient dining environment.

Teaching Assistant, CS24000 - C Programming

Jan 2019 - present

- Responsible for grading student code and attending labs to solve doubts.
- Solved assignments and found bugs in them before being released to students.

Projects

CourtVotes - ReactNative iOS and Android Application

2019 - present

- Working on an application to allow users to rate specific dishes at dining courts.
- Suggests and learns based on users past preferences and friend's votes.
- Responsible for backend and database portion of app using Firebase.

Math Question Generator, Java

2016 - 2017

- Created a Java application which creates random math test-style questions.
- Intended to be used as a quiz machine/ question bank to prepare for exams.

Path Finding Orbs, Processing 3

2018

- Experimented with a machine learning algorithm for path finding objects.
- Orbs can find their way to a target through obstacles using a genetic algorithm.
